

Energy Efficient Lighting & Refrigeration Solutions that Reduce Your Energy Consumption, "Green" Your Business, and Save You Money!

Efficient Lighting & Maintenance Inc.

Helping Connecticut Businesses Save Electricity Since 1981

If you ask the owner of this Shell gas station and convenience store, Singh, what he enjoys most about the upgrades made to the lighting and refrigeration in his store, you will likely get a mixed answer. The work done by Efficient Lighting & Maintenance, Inc (EL&M) is not only saving the business money, but the new lighting has improved his sales. "The customers are noticing the cooler now, and that means more beverage sales", said Singh. Indeed, it is difficult not to notice the beverage coolers now, with its newly lit up with state of the art LED lights.

Edgar Jarina is the proud owner of four McDonald's locations, including a "Double Decker" located on Westport Ave in Norwalk, CT. "I was very pleased with the results of the work Efficient Lighting did. I think it is a move that every small business owner needs to make," said Edgar. These restaurants are a wonderful representation of how energy conservation upgrades result in savings for businesses.

Efficient Lighting & Maintenance (EL&M) was able to upgrade indoor and outdoor lighting in all four of Edgar's locations. EL&M was also able to improve on the efficiency of the walk-in coolers and freezers by replacing the motors and adding refrigeration controls. The outcome is saving the business an estimated 121,298 kilowatt-hours per year, amounting to \$20,184 in annual cost savings.

"I am happy that there were no up-front costs for the project and I am looking forward to seeing the energy savings now that the work is done," Edgar added.
